

WE KNOW FIRE  
WE KNOW SAFETY  
WE KNOW YOU

## PRODUCTS

Knowsley SK manufacture an extensive range of standard & customised products, systems and solutions for fire fighting applications in the most demanding environments. Our range includes foam proportioning systems, monitors, hydrants, valves and nozzles through to mobile equipment and larger deluge skids & are the 1st choice for high-value asset protection.

## FOAM SYSTEMS

Our products and services combined with our industry and application experience can help you to resolve many of the issues often associated with foam based fire suppression systems. With a range of both powered and water driven foam proportioning systems we can help you to design, build and commission the safest and most reliable fire protection systems available.

## DESIGN

We work with fire protection contractors to provide water & foam based suppression systems helping to protect high value assets. Our dynamic team of experts support end-users, contractors and industrial fire protection specialists not just with our products, but also assisting with overall system design

## WORKING WITH US

If you are a sprinkler contractor looking to move into high hazard and/or foam based systems, or are an established business within the sector looking for engineering, design or supply of specialist equipment, Knowsley SK are ideally suited to support you. With a unique offering combining product, design, commissioning & maintenance we can help you to design & deliver the safest and most reliable fire protection systems available.

We can support your business with:

- Process design
- Hydraulic analysis of firewater & foam based systems
- Equipment layout & construction drawings
- 3D visualisation
- Supply & commissioning support
